Water retail licence variation application –

Cape Jaffa Anchorage Essential Services

Submission

I own a holiday rental property within the Cape Jaffa Anchorage. It is frequently rented out by holidaymakers and has been an important income source for my family. If this application is successful, I will lose that income (between \$20,000 and \$30,000 per year), which will likely force me to sell. Selling a property that is reliant on a non-drinking water supply will devalue it considerably.

████████████████████, has been deceitful from the beginning.

In relation to CJAES specifically, ██████████ CJAES representatives have lied about the reasons for the water outages – in short, ██████████ CJAES has not repaired or maintained the water treatment plant at the expense owners. ██████████ CJAES have done this to save themselves money at the expense of owners and holidaymakers (who won't return). Now ██████████ is trying to vary the water licence so ██████████ CJAES can bypass treating the water altogether. At the moment we only have high fluoride to worry about, if this application is successful, it will be a whole new disastrous story for owners.

██████████, via ██████████ Cape Jaffa Anchorage, sold blocks to owners on the basis that they would be connected to a safe drinking water supply when ██████████ knew the treatment plant was not up to scratch, and then he hasn't maintained it.

██████████, under the guise of CJAES, is quite happy for the owners to again wear the cost of ██████████ lies and ██████████ mistakes.

The owners are cross and will not take another hit.

██████████ (CJAES) can put ██████████ hand in ██████████ own deep pocket for once and bring the treatment plant up to scratch, which is what we were told we were buying into in the first place.

CJAES have silenced owners with lies so many have not elevated their complaints, but now it is clear what they were up to all along.
