

7 April 2016

Hi Nathan

I strongly support any improvement to the Orroroo water supply as the current water quality has a negative impact on the life span of much of our equipment at the Orroroo Hospital and the Orroroo Community Home. Our hot water and warm water systems, commercial dishwashers, pan sanitisers and commercial washing machines have a much reduced life and are very expensive to repair or replace. General wear & tear on our water reticulation systems is also much greater at Orroroo than at other regional sites.

regards
