**Subject:** re feed in tariff

*Sir,*  
*I read with interest the “proposed retailer feed-in tariff 2015-16.*  
*Sir, i believe that with retailers charging more and more for electricity that you have been influenced too much by the submissions of these retailers.*  
*Many of us who have installed solar panels in an attempt to reduce this states reliance on non – renewable sources of power are not receiving a fair return on our investment.*  
*Power companies are currently paying on average 7.2 cents per kilowatt hour from their own pockets, and charging over 31 cents per kilowatt hour for this same power.*  
*I consider this profit for the power companies of over 300 percent to be immoral. You are considering lifting this profit margin to over 500 percent?*  
*The state government has disclosed that their ideal is for an increased proportion of power generated by renewable sources to over 45 percent.*  
*Your proposed feed in tariff will do nothing to further this aim, as people will not invest without adequate return.*  
*I am very angry with power companies for their attitude towards existing clients, and your proposal for this feed in tariff can only be seen as a further insult to the people of this state, who are being faced with the highest prices for power in this country.*  
*Please re think this proposal.*  
*Sincerely*  
*Rohan M. Lewis.*
